

# Incident handler's journal

## Instructions

As you continue through this course, you may use this template to record your findings after completing an activity or to take notes on what you've learned about a specific tool or concept. You can also use this journal as a way to log the key takeaways about the different cybersecurity tools or concepts you encounter in this course.

|                            |   |
|----------------------------|---|
| <b>Date:</b><br>06/11/2025 | <b>Entry:</b><br>1  |
| Description                | Review of a ransomware incident where attackers exploited phishing emails to gain access and encrypt critical healthcare company data, demanding a ransom. This entry aligns with the Detection and Analysis phase, as the incident was identified and initial information gathered for further investigation.  |
| Tool(s) used               | None  |
| The 5 W's                  | <ul style="list-style-type: none"><li>• <b>Who:</b> An organized group of unethical hackers (suspected ransomware threat actors)</li><li>• <b>What:</b> A ransomware security incident where the attackers successfully encrypted critical company data and demanded a significant ransom payment for decryption.</li><li>• <b>Where:</b> The targeted organization is a healthcare company, impacting its IT systems and sensitive data.</li><li>• <b>When:</b> The incident was first detected on Tuesday at 9:00 AM.</li></ul> |
| Additional notes           | <ul style="list-style-type: none"><li>• The company should enhance its employee security awareness training to reduce phishing risks.</li><li>• Consider deploying advanced email filtering and endpoint protection to prevent similar incidents.</li></ul>   |

---

|                            |   |
|----------------------------|---|
| <b>Date:</b><br>06/15/2025 | <b>Entry:</b><br>2  |
| Description                | Investigation of a phishing alert where an employee received and interacted with a suspicious email attachment. This occurred during the Detection and Analysis phase, as suspicious activity was identified and validated using VirusTotal.  |
| Tool(s) used               | VirusTotal (used to analyze the suspicious file)  |
| The 5 W's                  | <ul style="list-style-type: none"><li>● <b>Who:</b> Malicious actor (phishing attacker)</li><li>● <b>What:</b> An employee received a phishing email containing a malicious file attachment. The employee opened the email and downloaded the file, introducing malware onto their computer.</li><li>● <b>When:</b> The incident occurred at 1:11 p.m.</li><li>● <b>Where:</b> A financial services company</li><li>● <b>Why:</b> The incident happened because the employee interacted with a phishing email, failing to identify it as malicious and unknowingly downloading malware.</li></ul> |
| Additional notes           | <ul style="list-style-type: none"><li>● Recommend implementing security awareness training for employees to improve phishing detection skills.</li><li>● Consider enhancing email filtering and anti-phishing tools to reduce exposure to such attacks.</li></ul>   |

---

|                             |   |
|-----------------------------|---|
| <b>Date:</b><br>06/16/2025. | <b>Entry:</b><br>3  |
| Description                 | Documentation of a phishing attack where an employee unknowingly downloaded malware via a phishing email. This corresponds to the Detection and Analysis phase, with escalation to SOC Level 2 for Containment planning.  |
| Tool(s) used                | Phishing email  |
| The 5 W's                   | <ul style="list-style-type: none"> <li>• <b>Who:</b> An employee who unintentionally opened a phishing email and downloaded malware.</li> <li>• <b>What:</b> The downloaded malware installed unauthorized software on the employee's computer.</li> <li>• <b>Where:</b> A financial services company</li> <li>• <b>When:</b> The incident occurred today at 1:11 p.m.</li> <li>• <b>Why:</b> The employee was unaware that the email was malicious and acted automatically, opening and downloading the file.</li> </ul> |
| Additional notes            | <ul style="list-style-type: none"> <li>• The incident has been confirmed as a phishing attack and escalated to SOC Analyst Level 2 for further investigation and response.</li> <li>• Recommend reinforcing phishing awareness training and reviewing email security controls.</li> </ul>   |

---

|                            |   |
|----------------------------|---|
| <b>Date:</b><br>06/17/2025 | <b>Entry:</b><br>4  |
| Description                | Review of a forced browsing and data exfiltration incident at a retail company, resulting in financial loss. The entry reflects both Detection and Analysis and Containment, Eradication, and Recovery phases as the incident was detected late and required mitigation actions.  |
| Tool(s) used               | Forced browsing (unauthorized URL access and enumeration)   |
| The 5 W's                  | <ul style="list-style-type: none"> <li>• <b>Who:</b> An anonymous malicious hacker</li> <li>• <b>What:</b> The attacker exploited the company's web application through a forced browsing attack, gaining unauthorized access and exfiltrating customer purchase data and transaction records.</li> <li>• <b>Where:</b> A retail company</li> <li>• <b>When:</b> First signs of the incident: December 22, 2022 at 3:13 p.m. <ul style="list-style-type: none"> <li>- Security team notified: December 28, 2022</li> <li>- Investigation period: December 28 – December 31, 2022</li> </ul> </li> <li>• <b>Why:</b> The company's web application had a vulnerability — a single log source revealed an unusually high volume of sequentially listed customer orders. The attacker identified and exploited this flaw to access data without proper authorization.</li> </ul> |
| Additional notes           | <ul style="list-style-type: none"> <li>• Perform routine vulnerability scans and penetration testing to identify and remediate web application weaknesses.</li> <li>• Strengthen access control mechanisms: <ul style="list-style-type: none"> <li>- Implement allowlisting to restrict access to approved URLs and block all other requests.</li> <li>- Ensure only authenticated and authorized users can access sensitive content.</li> </ul> </li> </ul>  |

Reflections/Notes:

**Were there any specific activities that were challenging for you? Why or why not?**

Some activities involving interpreting complex phishing indicators and correlating log data were challenging because they required close attention to subtle details. It took practice to identify patterns quickly and confidently.

**Has your understanding of incident detection and response changed since taking this course?**

Yes — my understanding has deepened significantly. I now see incident response as a structured lifecycle where preparation, detection, containment, and recovery are tightly connected rather than isolated steps.

**Was there a specific tool or concept that you enjoyed the most? Why?**

I especially enjoyed working with VirusTotal because it provided fast, actionable intelligence on suspicious files and URLs. It made threat analysis feel more manageable and practical.
